VICTORS Study

Visual Structure and Function in Contact Sport Athletes

WHO?

We are recruiting subjects for two study groups:

1. Contact sport athletes (Football, Boxing, Hockey, Soccer and Rugby)
   Active or retired professional contact sport athletes
2. Non-contact sport athletes
   Athletes in non-contact sports or subjects not engaged in sports

WHAT?

This is a multi-centered, national study. The goal of this study is to determine if professional contact sports athletes have a greater amount of thinning in the retina compared to people who have not participated in contact sports and whether there is a correlation with visual function.

HOW?

Vision testing and non-invasive retinal picture scans

HOW LONG?

Approximately 45 minutes/session
This is intended to be a long term study lasting approximately 5 years, with annual follow-up visits.

WHERE?

NYU Langone Medical Center
Department of Neurology
240 East 38th St., 20th Floor
New York, NY 10016
