**The COVID-19 pandemic drastically affected the number of in-person events we had planned for 2020.** But just before the pandemic hit the United States, we were fortunate enough to be able to gather for our semi-annual Legacy Family Huddle. In early February, 2020, CLF staff, VA-BU-CLF Brain Bank researchers, and many of our Legacy Family Community members came together for the Huddle in Orlando, Florida.

# Letter from Leadership

## Dear Supporters,

The COVID-19 pandemic changed the world and caused extraordinary suffering and loss of life. In response, we pivoted to focus on supporting the mental health of our community by offering resources, education, and most importantly, hope to those struggling with long-term symptoms of concussions and CTE while in isolation.

We then shifted our strategic plan to focus on our programs that remained effective in our new socially distant reality, and we were excited to see major program achievements, including the growth of Education & Advocacy programs like the CLF Media Project (pg. 21). We celebrated the two-year anniversary of the CLF HelpLine by supporting our 2,000th client during their time of need (pg. 22). And we announced a foundational partnership with Wounded Warrior Project to power Project Enlist (pg. 23), our program serving as a catalyst for research on brain trauma in the military community.

We also reached a major research milestone when we crossed 1,000 brains donated to the VA-BU-CLF Brain Bank. Our report, 1,000 Reasons for Hope, celebrates those first 1,000 Legacy Donors and the discoveries they have made possible. We've included a preview of the report in this document.

None of this success would have been possible without supporters like you. Your donations, time, and advocacy allowed us to reach our fundraising goals and help CLF thrive during the pandemic.

Thank you for your continued support as we work towards achieving our vision of a world without CTE and concussion safety without compromise. We can't wait to show you what we have in store for 2021.

Sincerely,

**Christopher Nowinski**  
Co-founder and CEO

**Robert Cantu**  
Co-founder & Medical Director

**Peter Carfagna**  
President, Board of Directors

# Mission and Vision

## Our Mission

The Concussion Legacy Foundation's mission is to support athletes, Veterans, and all affected by concussions and CTE; achieve smarter sports and safer athletes through education and innovation; and to End CTE through prevention and research.

---

## Our Vision

A world without CTE, and concussion safety without compromise.

# 1000

Reasons for **Hope**

How the first 1,000 Legacy Donors studied at the VA-BU-CLF Brain Bank are mapping the future of brain trauma research

We dedicated 1,000 Reasons for Hope to our Legacy Donors – our term for our brain donors. We call them Legacy Donors to honor them and to highlight the legacy they’ve left through scientific research.

Through the next 14 pages, you’ll get a glimpse of the data, family testimonials, and researcher insights that are featured in the full “1,000 Reasons for Hope” report at [ConcussionFoundation.org/1000Reasons](https://ConcussionFoundation.org/1000Reasons).

## Executive Summary from Brain Bank Leadership

In 2007, CLF co-founder Chris Nowinski met Dr. Ann McKee, one of the world's foremost experts on neurodegenerative disease. Nowinski, a former Harvard football player and WWE professional wrestler who retired due to concussions, had an important question.

*"If CLF works with families to get permission to study the brains of deceased football players, would you be willing to study them and help us understand the degenerative brain disease CTE?"*

At the time, only 45 cases of Chronic Traumatic Encephalopathy (CTE) had been published in the literature. Most of the studies concerned boxers and were published over 40 years before, and little was known about the disease.

Dr. McKee said yes, and the rest is history. The VA-BU-CLF Brain Bank, directed by Dr. McKee, was launched in 2008 as a collaboration between three organizations: the Boston VA Healthcare System, Boston University School of Medicine, and the Concussion Legacy Foundation. Over the next 13 years, more than 1,000 amazing families donated their loved one's brain to the research. The work quickly expanded beyond former football players to include all contact sport athletes, military Veterans, victims of interpersonal violence, and most recently, single traumatic brain injuries. The research team has published more than 100 original studies and has redefined our understanding of the long-term effects of head impacts. The work has sparked a global revolution in concussion and brain trauma awareness and changed how we play sports.

## The Co-Founders of the VA-BU-CLF Brain Bank

Our initial goal was to understand CTE's neuropathology and pathogenesis, clinical presentation, genetics and other risk factors, and biomarkers.

With these insights, we could advance CTE prevention, methods of detection during life, and treatment. This report provides a window into what we have learned and celebrates those who made it possible: the generous brain donors and their families, the dedicated scientists and research teams, the diligent outreach teams, the funding organizations and philanthropists.

Even with all we have accomplished so far, what excites us the most is the prospect of what the next 1,000 Legacy Donors will teach us. Researchers for similar diseases published their most important findings only when they surpassed the statistical strength of thousands of donated brains.

**As you read through this preview of the report, you will meet our brain donor families, see the game-changing discoveries made by VA-BU-CLF Brain Bank researchers, and learn what the future of research can achieve with your support.**

Dr. Cantu

Dr. Ann McKee

Dr. Nowinski

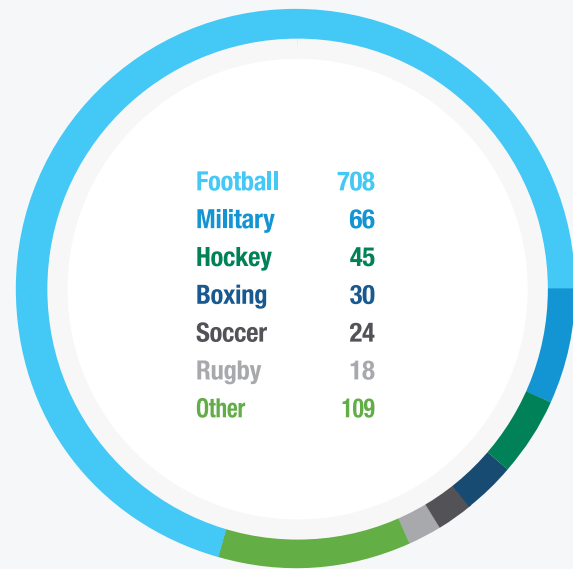

Dr. Robert Stern

## Primary Exposure of Donors

Prior to 2005, there were only 45 cases of CTE ever diagnosed in the world's medical literature. 39 were boxers, which is why CTE was first called "Punch Drunk".

The other six cases comprised three victims of abuse, one entertainer, and one amateur soccer player. The world knew almost nothing about CTE, and CLF recognized that the only way to learn about CTE was to recruit at-risk brain donors and learn from them. We have learned CTE is not just a disease of boxers, as a far wider population of athletes are at risk for CTE, as are military Veterans and first responders.

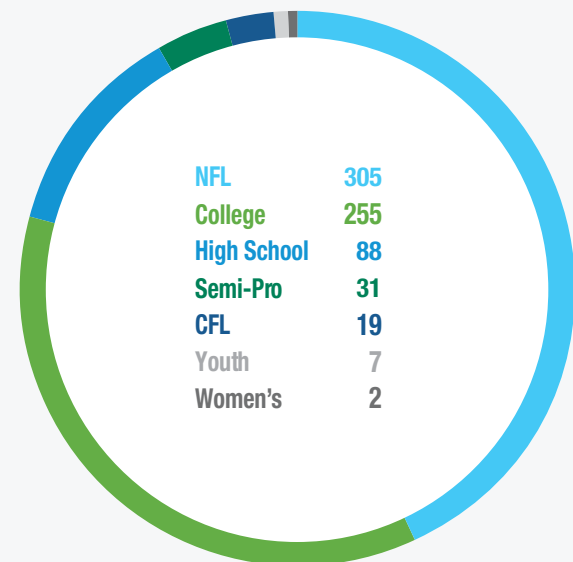

**Other:**

Amateur Wrestling	15	Rodeo	3
Martial Arts	10	Swimming	2
Non-sport TBI	10	Cycling	2
Baseball	8	Ski & Snowboard	2
Lacrosse	7	Field Hockey	2
Entertainers	7	Volleyball	2
First Responder	5	Head banging	2
Basketball	4	Auto Racing	1
Domestic violence	4	Tennis	1
Extreme Sports	4	Track & Field	1
Equestrian	4	Water Polo	1
Gymnastics	4	No exposure	5
Sliding Sports	3		

## The Link Between Football and CTE

More than 70 percent of our Legacy Donors were football players, so we know more about that population than any other. They have taught us that each year of playing football may increase a player's odds of developing CTE by as much as 30 percent. More than 1 in 4 deceased NFL players now become Legacy Donors, which is providing an unprecedented window into the population that played football the longest.

## How discoveries at the Brain Bank have affected change in sports

### First CTE Cases Identified In:

 <b>Baseball</b> Pro	 <b>Football</b> College, high school, youth	 <b>Ice Hockey</b> Pro, college, juniors, high school, youth
 <b>MMA</b> Pro	 <b>Rugby</b> Pro, college, amateur	 <b>Soccer</b> Pro, college, high school

### CTE Discoveries Inspire Sports Reforms

#### Ice Hockey

In 2009, we diagnosed the first NHL player with CTE. In 2011, USA Hockey **banned checking up to age 13.**

#### Soccer

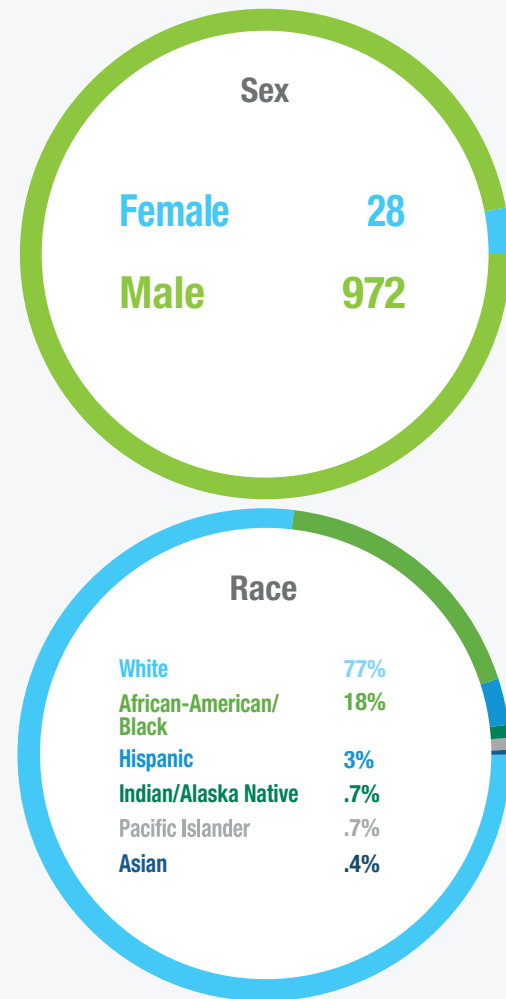

In 2014, we diagnosed the first American soccer player with CTE. In 2015, U.S. Soccer **banned heading until age 11.**

## Sex and Race of Donors

Recruiting female Legacy Donors has proven difficult, likely due to Title IX legislation not being passed until 1972 and because the primary exposure source for our brain donors is from tackle football.

The Brain Bank is more diverse when it comes to race, but it is influenced by the history of race relations in America and therefore college and professional football. Ice hockey, the sport which has produced the second-most Legacy Donors, is not a historically racially diverse sport.

We are actively recruiting more female research participants, athletes, and Veterans from diverse racial backgrounds to ensure our discoveries benefit all.

## Decade of Death

The VA-BU-CLF Brain Bank is the only brain bank in the world that has studied CTE from its earliest beginnings to its final stage. With more than 135 donors under age 30, more than half of whom had CTE, this research has provided the world's first window into the earliest stages of CTE, including how and where it begins forming in the brain.

# 10

## Landmark Studies

Since 2008, the VA-BU-CLF Brain Bank has published more than 100 game-changing studies. Here, we spotlight 10 breakthrough studies published by Brain Bank researchers since 2009.

2009

### Chronic Traumatic Encephalopathy in Athletes: Progressive Tauopathy After Repetitive Head Injury

Journal of Neuropathology & Experimental Neurology

We review 48 cases of neuropathologically verified CTE recorded in the literature and document the detailed findings of CTE in three professional athletes (one football player and two boxers).

## Landmark Studies

2010

### TDP-43 proteinopathy and motor neuron disease in chronic traumatic encephalopathy

Journal of Neuropathology & Experimental Neurology

In some individuals with CTE, the TDP-43 proteinopathy extends to involve the spinal cord and is associated with motor neuron disease. This was the first pathological evidence that repetitive head trauma experienced in collision sports might be associated with the development of a motor neuron disease.

2012

### Chronic Traumatic Encephalopathy in Blast-Exposed Military Veterans and a Blast Neurotrauma Mouse Model

Science Translational Medicine

These results identify common pathogenic determinants leading to CTE in blast-exposed military Veterans and head-injured athletes and additionally provide mechanistic evidence linking blast exposure to persistent impairments in neurophysiological function, learning, and memory.

2013

### The spectrum of disease in chronic traumatic encephalopathy

Brain

The frequent association of chronic traumatic encephalopathy with other neurodegenerative disorders suggests that repetitive brain trauma and hyperphosphorylated tau protein deposition promote the accumulation of other abnormally aggregated proteins including TAR DNA-binding protein 43, amyloid beta protein and alpha-synuclein.

## Landmark Studies

2016

### Tau prions from Alzheimer's disease and chronic traumatic encephalopathy patients propagate in cultured cells

Proceedings of the National Academy of Sciences

The progressive nature of neurodegenerative diseases is due to the spread of prions, misfolded infectious proteins, in the brain. This study established that CTE prions are distinct from prions in other tauopathies such as Pick's disease and progressive supranuclear palsy.

2016

### The first NINDS/NIBIB consensus meeting to define neuropathological criteria for the diagnosis of chronic traumatic encephalopathy

Acta Neuropathologica

The first consensus criteria endorsed by the National Institutes of Health for the pathological diagnosis of CTE was made possible by the VA-BU-CLF Brain Bank. In 2015, eminent neuropathologists from around the world, along with observers from the National Institute of Neurological Disorders and Stroke and the National Institute of Biomedical Imaging and Bioengineering, gathered at Boston University School of Medicine to review cases at the Brain Bank.

2017

### Clinicopathological Evaluation of Chronic Traumatic Encephalopathy in Players of American Football

Journal of the American Medical Association

Among 202 deceased former football players, CTE was neuropathologically diagnosed in 177 players (87%); including 0 of 2 pre-high school, 3 of 14 high school (21%), 48 of 53 college (91%), 9 of 14 semiprofessional (64%), 7 of 8 Canadian Football League (88%), and 110 of 111 National Football League (99%) players.

## Landmark Studies

2018

### Lewy Body Pathology and Chronic Traumatic Encephalopathy Associated with Contact Sports

Journal of Neuropathology and Experimental Neurology

Contact sports participation may increase risk of developing neocortical Lewy Body Disease, and increased Lewy Body Disease frequency may partially explain extrapyramidal motor symptoms sometimes observed in CTE.

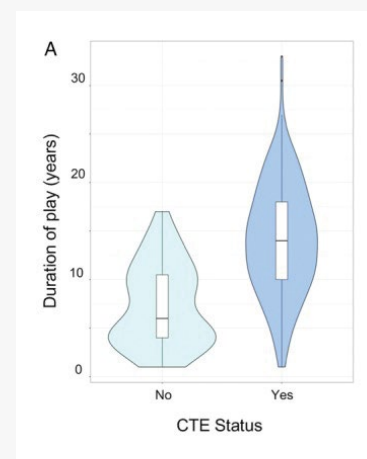

2019

### Duration of American Football Play and Chronic Traumatic Encephalopathy

Annals of Neurology

A study of 266 football players, of which 223 had CTE, explored risk factors affecting CTE status and severity. The study revealed that each year of tackle football participation increases the odds of developing CTE by 30 percent and increases the odds of having severe CTE by 14 percent. The findings inspired CLF's award-winning "Tackle Can Wait" campaign.

2020

### Association of probable REM sleep behavior disorder with pathology and years of contact sports play in chronic traumatic encephalopathy

Acta Neuropathologica

Probable REM Behavior Disorder (pRBD) in CTE is associated with increased years of contact sports participation and may be attributable to Lewy body and brainstem tau pathologies. Athletes with CTE were 32 times more likely than controls to have pRBD.

## Our Legacy Family Community

The decision to donate a loved one's brain is deeply personal and often motivated by an interest in improving outcomes for others. We created our Legacy Family Community to support the families of Legacy Donors through the research process and beyond, and to honor their loved ones. Led by CLF's Director of Legacy Family Relations Lisa McHale, this community helps families recognize they are not alone.

Having watched their loved one suffer, many of our donor families want to better understand why their loved one changed. While the results of the research won't provide every answer, they can offer insight into the donor's life, and many families express a sense of closure after learning what the researchers discovered. Each brain donation brings us closer to scientific breakthroughs that are creating a roadmap for how to diagnose and treat CTE during life.

Dwayne Johnson, son of former professional wrestler Rocky Johnson, is one of the family members who joined our community in 2020. We are forever indebted to Johnson and every family that has put their trust in us by donating their loved one's brain. Their contributions have positively impacted the course of brain trauma research. As the Legacy Family Community continues to expand, our hope is that the next 1,000 brain donors will help answer the critical questions that will allow us to diagnose, treat, and ultimately cure CTE and other effects of brain trauma.

### Dwayne Johnson

Son of Rocky Johnson

"I'm very grateful for the insight the Concussion Legacy Foundation has been able to provide me and my family. Losing my dad without warning was a tough kick in the gut, but one of the saving graces of his passing was coming to understand just how healthy his brain was.

As a professional wrestler his entire life, his brain endured a lot. I know he'd be proud knowing the donation of it has impacted brain research and hopefully can shed some light and understanding, not only in science, but also to other families around the world.

Thank you to my good friend, Dr. Chris Nowinski and his brilliant cadre of doctors for their research."

# The Next 1000

**Thanks to our unique research foundation at the VA-BU-CLF Brain Bank, we are poised to make tremendous advancements in the fight against CTE and traumatic brain injuries with the next 1,000 Legacy Donors studied.**

We have diagnosed more than 70 percent of the world's CTE cases, and the evidence suggests CTE is an environmentally caused disease. But we've also found that clinical outcomes vary significantly among individuals, and part of that variability is caused by genetics. Once we have studied 2,000 brains, we will **finally have the statistical power** to isolate the genes associated with CTE susceptibility and resilience, and unlock new targets for therapies.

We are on the cusp of diagnosing CTE accurately in the living thanks to several key components of the Brain Bank's research. **First, we are working with donor families** to help doctors understand and treat the clinical symptoms of CTE, and we are supporting the development of diagnostic criteria for Traumatic Encephalopathy Syndrome, or TES. **Second, we are working with academic collaborators** and life sciences companies to develop new radioactive ligands that will bind to CTE tau and allow CTE to be imaged on positron emission topography (PET) scans. **Third, we are identifying the CTE-specific forms of**

**abnormal tau** in our Brain Bank, which we will then be able to identify and measure in blood and cerebrospinal fluid.

To support and accelerate the fight against CTE, CLF is recruiting researchers from around the globe through the Concussion Legacy Foundation Global Brain Bank, which has built brain banking partnerships in Australia, Brazil, and New Zealand, with more to come. **By establishing CTE as a global public health problem,** we will enable our peers around the world to bring their talents to this crucial mission.

Since we have shown that CTE can also be a consequence of military service, **we are investing in understanding CTE and other consequences of traumatic brain injury in our military Veterans.**

Since we have shown that CTE can also be a consequence of military service, we are investing in understanding CTE and other consequences of traumatic brain injury in our military Veterans.

**Dr. Ann McKee**

*"Our understanding of CTE is far behind that of other neurodegenerative diseases like Alzheimer's Disease and ALS. Each case we have the honor to study accelerates the science of CTE. Thanks to our Legacy Donors, incredible team, and growing national and international collaborations, we are now on the cusp of major breakthroughs."*

**Dr. Chris Nowinski**

*"The VA-BU-CLF Brain Bank has provided evidence that a football player's odds of developing CTE increase with each year played, and the younger one starts, the earlier CTE symptoms may develop. This inspired CLF's Flag Football Under 14 campaign, which encourages parents to wait until high school to enroll their children in tackle football. We believe that simple change might prevent 50 percent of football CTE cases. We are eager to expand this research to other sports, but we need a larger sample size."*

We know CTE does not just affect the individual; it also impacts spouses, parents, and children. We launched a formal study investigating the impact of CTE on families so we can build and provide appropriate support to families with CTE in a loved one. Better support will allow families to stay together longer, live with dignity, protect their finances, and minimize the emotional impact on their children. We are also intensely studying the relationship between concussions, CTE, and psychiatric symptoms and suicide. Knowing why brain trauma causes these symptoms will enhance prevention efforts to support the mental health of concussion and CTE patients.

As researchers get closer and closer to diagnosing and treating CTE in living people, we

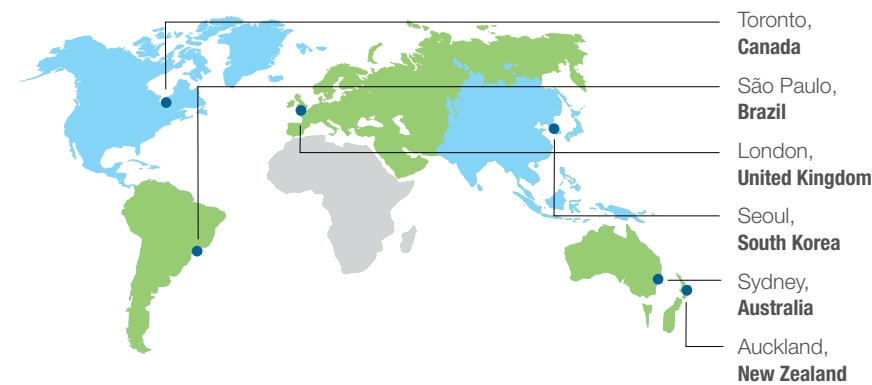

are also advancing CTE prevention. In 2019, we discovered that CTE risk and severity are closely correlated to the number of years of play in male American football players. These findings have sparked a national discussion on raising the age of first exposure to tackle football to prevent CTE. We are recruiting research subjects, especially female athletes and military Veterans, so we can advance knowledge that will help these historically understudied populations.

If you would like to be a part of the discoveries and breakthroughs that will be possible with the next 1,000 Legacy Donors, consider pledging your brain to research or donating to our research efforts. Together, we can create a world without CTE.

# Creating a world without CTE through global collaborations

The best science is propelled by collaboration. From the beginning, we prioritized recruiting more scientists from outside institutions to the fight against CTE. We accomplish that goal by making CTE tissue available to outside researchers with innovative research ideas. We are proud to have shared tissue with 100 outside research groups at 50 institutions around the globe.

## Collaborating Countries

## Collaborating Institutions

- Centre for Addiction and Mental Health 
- Seoul National University 
- University of Cambridge 
- University of Sydney 
- University of Auckland 
- University of Sao Paulo 

**Dr. Michael Buckland** Director, Australian Sports Brain Bank

*“By identifying the first cases of CTE in men who have played rugby league and Australian Rules Football, we’ve launched a national conversation on the future of sports in Australia that is already resulting in rule changes in our games.”*

**Dr. Lea Grinberg** John Douglas French Alzheimer’s Foundation Endowed Professor, Memory and Aging Center, UCSF

*“Research shows traumatic brain injury increases the risk of developing dementia in later life. The risk seems to go beyond CTE. Postmortem studies will help to clarify what this risk is and, as a consequence, help to mitigate the dementia epidemic.”*

**Sir Richard Faull** Director, New Zealand Neurological Foundation Sports Human Brain Bank at the Centre for Brain Research at the University of Auckland

*“There is so much to be learned about CTE. We are eager to apply the same methods we’ve used to advance knowledge on Huntington’s disease, Alzheimer’s disease, Parkinson’s disease, epilepsy, and Motor Neuron disease to advance the global understanding of CTE.”*

## Advisory Roles

Concussion Legacy Foundation co-founders Dr. Robert Cantu and Chris Nowinski, PhD are proud to serve as advisors to more professional and collegiate sports organizations than any concussion-focused nonprofit in the world.

By working with professional and collegiate sports to educate stakeholders and set policy, CLF sets the example for high school and youth sports to follow.

**AEW**

**The FA**

**Ivy League**

**NFLPA**

**Positive Coaching Alliance**

**World Rugby**

**WWE**

## Education & Advocacy

### The CLF Media Project

The CLF Media Project is the first and only concussion reporting curriculum designed specifically for sports media and sports journalism students. Through more accurate reporting, sports media can help educate the public about the proper standards of concussion management.

#### 2020 Highlights

- Taught our Concussion Reporting Workshop U at eight new colleges & universities
- Taught our first ever Concussion Reporting Workshop PRO to professional journalists in the U.K.
- 45 new sports media professionals took our Concussion Reporting Certification.
- Debuted a new Twitter show, "Covering Concussions" to highlight good & bad sports media coverage of concussions.

### Flag Football Under 14

CLF continues to be the leading voice advocating for parents to wait to enroll their children in tackle football until age 14.

Research shows a child's odds of developing CTE double every additional three years they play tackle football. Our "Tackle Can Wait" PSA campaign swept 2020 awards season, and we have another eye-opening PSA planned for 2021.

#### 2020 Highlights

- "Tackle Can Wait" PSA awards and nominations:
  - Won Clio Sports Grand Prize
  - 4x award winner at Lisbon Health Ad Awards
  - 4x Shorty Award finalist, won gold for Pro Bono
  - Telly Awards finalist
  - Manny Awards finalist, Philanthropic Campaign

## Education & Advocacy

### CLF Helpline

The CLF Helpline provides personalized, one-on-one support to patients and families who are struggling with the outcomes of brain injury.

Since the CLF Helpline was launched, we've helped more than 2,500 patients and families find nearby doctors, educational resources, and peer-support opportunities to help them maintain hope throughout their recovery.

#### 2020 Highlights

- 1,129 total Helpline requests
  - 44% involved suspected CTE
  - 46% involved PCS
  - 9% involved interest in research participation
  - 58% were from patients
  - 42% were from caregivers
- 85 mentorship connections arranged between patients/caregivers and CLF-trained Peer-Support Volunteers.

### Webinar Series

In response to the pandemic, we made it our number one priority to support the mental health needs of patients and families. We began a series of zoom webinars featuring experts and advisors to help those who were suffering – many of them in isolation – feel better.

We also published 52 #ConcussionHope videos, one each week, spreading positive messages of concussion recovery to those in need.

#### 2020 Highlights

- 14 concussion and CTE webinars amassing more than 50,000 views
- Guests with expertise on concussion, CTE, dealing with crisis, vision, physical therapy, mindfulness & meditation, caregiving, & more
- 52 #ConcussionHope videos viewed more than 56,000 times on Instagram

## Research

### Project Enlist

Project Enlist's mission is to serve as a catalyst for research on military Veterans with TBI, CTE and PTSD by rapidly increasing the number of Veteran brains donated to brain banks for study.

Brain Bank research is an essential step in developing effective treatments to help protect and support the heroes who courageously fight for our nation.

#### 2020 Highlights

- Signed foundational partnership with Wounded Warrior Project to power Project Enlist
- Created CLF Veteran Advisory Board to raise awareness and form partnerships to advance Project Enlist
- Created new Project Enlist logo
- Record 515 brain pledges from the military community

### CTE Cases in Australia

In 2018, we launched the CLF Global Brain Bank to accelerate global research on CTE.

The Australian Sports Brain Bank, the founding member of the Global Brain Bank, has created a sustained national conversation on brain trauma and sports reforms after diagnosing some of the country's most beloved athletes with CTE.

#### 2020 Highlights

- Published the first ever case of CTE in an Australian rules football player
- Discovered CTE in three total AFL players
