

Make a difference today.

PLEDGE TO DONATE YOUR BRAIN TO RESEARCH.

Where will my brain go?

The **Concussion Legacy Project** is a brain bank at the University of Oxford formed through a partnership between the Concussion Legacy Foundation UK and the Jeff Astle Foundation.

Who is leading the research?

The Concussion Legacy Project is led by **Dr. Gabriele De Luca**, Professor of Clinical Neurology and Experimental Neuropathology in the Nuffield Department of Clinical Neurosciences, University of Oxford and Director of Clinical Neurosciences Undergraduate Education at Oxford Medical School.

Your pledge matters!

Advancements in research wouldn't be possible without tissue to study. Pledging your brain is a great gift that **helps others in a truly impactful way.**

For imminent brain donation:

Please reach out to the 24-hour brain donation hotline at +44 07534 029 223.

The process:

- Sign up to our clinical registers [here](#).
- When your loved one passes away, contact our brain donation team on **07534 029 223**.
- One of our Neuropathologists at the Oxford Brain Bank will examine the brain and undertake the standardised range of tests for CTE and other conditions.
- The next of kin will be contacted post examination for a consultation meeting whereby the findings will be explained.
- Throughout this process, and beyond, you will have access to the Concussion Legacy Family community and to support from the CLF team.

I don't know how we would have ever come to terms with what we had been through, had we not received answers through brain donation. It meant the world to us to hear there was a reason for our suffering and that we could connect with other families who had shared similar experiences.

-Sam Pyle Buono
